

# Developing a mini racing game - Group C

J.Miehe, C.Bormann, D.Peters, M.Anhuth, D.Studer

RWTH Aachen University

28.03.2013

# Outline

# Miniature Madness

## Outline

- game idea
- XML-Importer
- graphics
- physics and gamelogic
- assets

# Game idea

Scene

# Game idea

## Gamemodes

- free driving mode
- round time mode

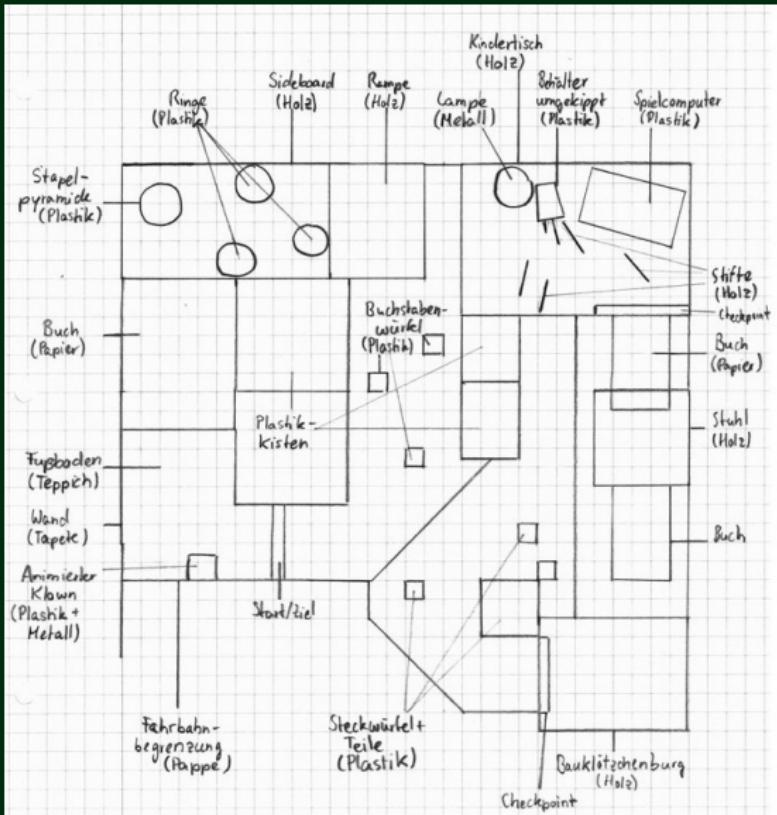

## Round time mode

## Movable objects

# Racing track sketch

# XML-Importer

## Architecture

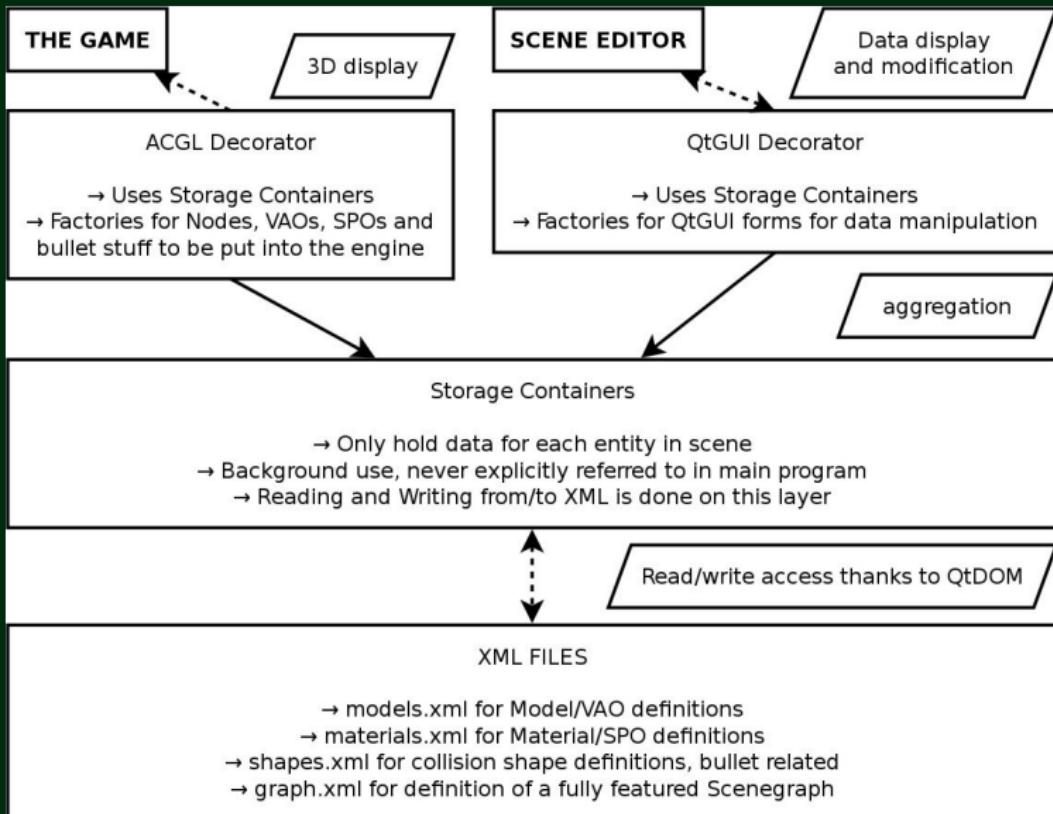

- ① Storage Container layer
- ② 3D Decorator
- ③ GUI Decorator

## Constellation

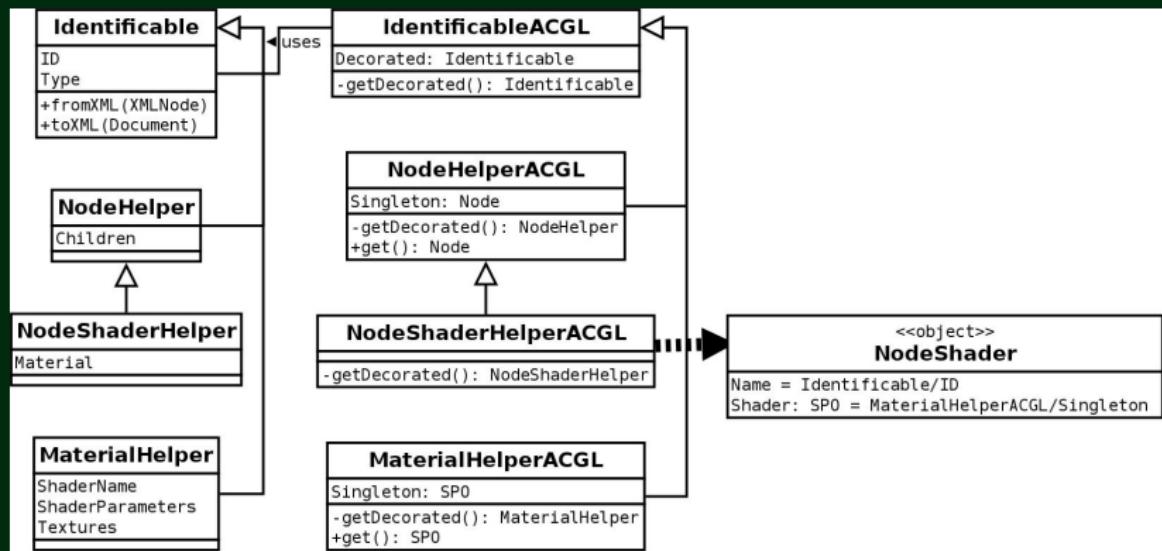

Layer 1 can be combined with either layer 2 or layer 3 to instantiate the needed types of objects

## Which is which?

## Simplified Example

# Graphics

## Implemented effects

- bumpmapping
- environment mapping
- glow

## Effects with unsolved issues

- trace of tires
- shadow mapping

## Discarded effect

- motion blur

# Graphics - bump mapping

Example image

## What?

- fakes bumpy surfaces
- used for many objects: tires, table, sideboard, etc.

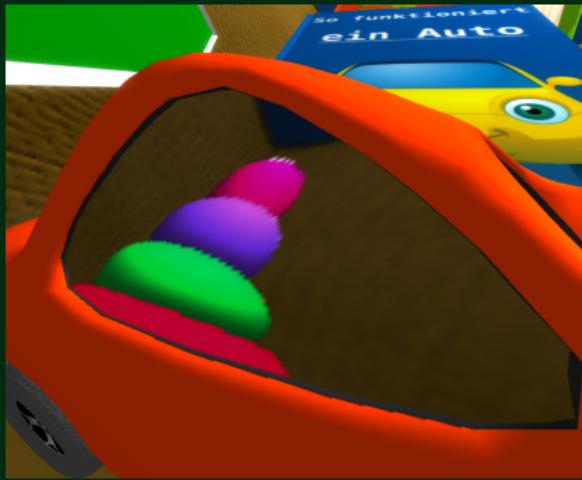

## Why?

- creates a more realistic atmosphere

# Graphics - environment mapping

Example image

## What?

- displays reflections from the environment
- in specification as cube mapping
- used only for car windows

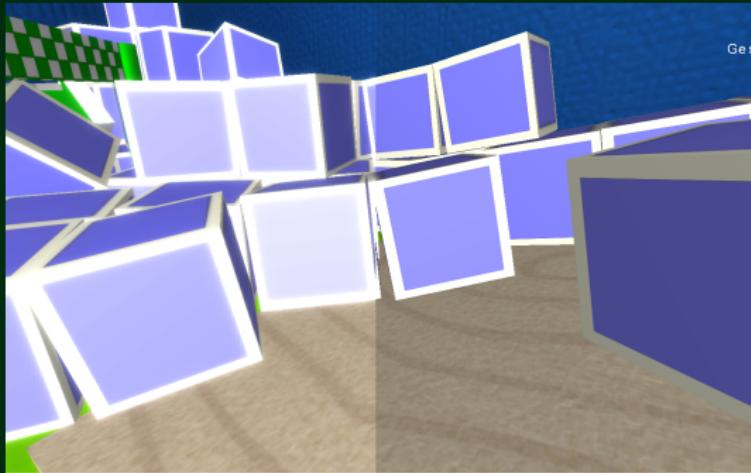

## Why?

- makes car windows more realistic

# Graphics - glow

Example image

What?

- fluoresce objects
- oversubscribe bright parts

Why?

- cartoon like
- lax but realistic atmosphere

# Graphics - traces of tire

## Problems

- first attempt: render into texture
- second attempt: particle effect
- problems with ACGL
- create own AO and VBO

## Unsolved issue

- probably memory mismanagement

# Graphics - shadow mapping

## Solved issues

- move camera to light position
- create depth buffer

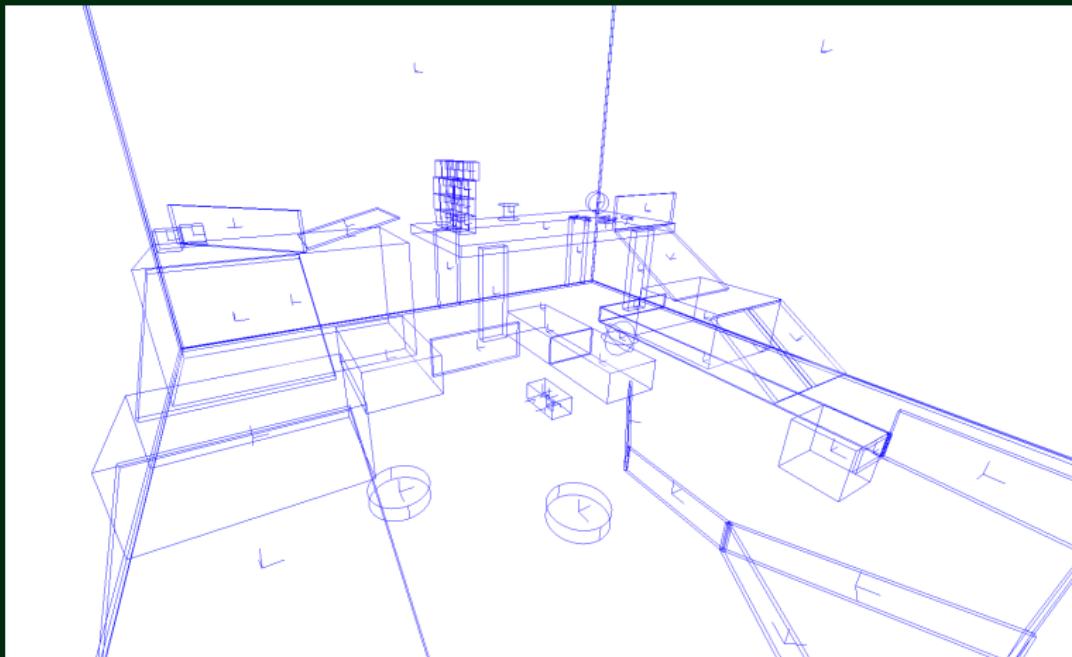

## Unsolved issue

- depth buffer seems to be broken

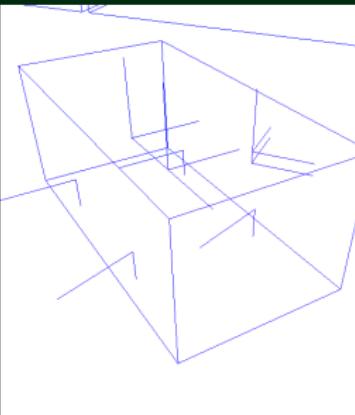

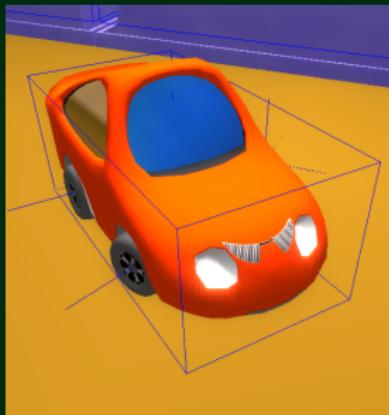

# Physics and Gamelogic

## Physics representation

# Physics and Gamelogic

Raycasting vehicle

## Features

- approximate real vehicle
- easy to compute
- easy to manipulate

## Problems

- update the position
- getMotionState

# Physics and Gamelogic

## Trigger System

## Trigger system

- based on contactPairTest
- saves ressources

## Checkpoints

- check progress
- provide reset option

# Physics and Gamelogic

## User Interface

## OpenGL text

- bitmap based font creation

```
! " # $ % & ( ) * + , - , /
